

Text PDF Translation Test 1

Computational thinking helps readers solve problems with precise abstractions and clear interfaces. This project-owned fixture tests multi-column reading order in a PDF reader. A line ending in computa-
tional should be joined conservatively.
Visit <https://example.com/docs> for details.

The right column follows the complete left column. Translation must preserve citations [1] and identifiers such as PDF.js and API_KEY. The formula $x^2 + y^2 = z^2$ stays original. A final sentence confirms page ordering.

Text PDF Translation Test 2

Computational thinking helps readers solve problems with precise abstractions and clear interfaces. This project-owned fixture tests multi-column reading order in a PDF reader. A normal paragraph begins in the left column. It should remain before the right column text. Visit <https://example.com/docs> for details.

The right column follows the complete left column. Translation must preserve citations [1] and identifiers such as PDF.js and API_KEY. The formula $x^2 + y^2 = z^2$ stays original. A final sentence confirms page ordering.

Text PDF Translation Test 3

Computational thinking helps readers solve problems with precise abstractions and clear interfaces. This project-owned fixture tests multi-column reading order in a PDF reader. A normal paragraph begins in the left column. It should remain before the right column text. Visit <https://example.com/docs> for details.

The right column follows the complete left column. Translation must preserve citations [1] and identifiers such as PDF.js and API_KEY. The formula $x^2 + y^2 = z^2$ stays original. A final sentence confirms page ordering.
